**FINTRUST DIGITAL BANK –
WEEK 2 PROJECT SUMMARY**

WEEK 2 OBJECTIVES

1.1 PROJECT OVERVIEW

Week 2 focused on moving from the business understanding and analytical planning completed in Week 1 to practical data analysis and dashboard development. The work involved analyzing the FinTrust customer and transaction datasets using SQL and translating the findings into an interactive Power BI dashboard designed to communicate insights to both technical and non-technical stakeholders.

1.2 WORK COMPLETED

- Performed SQL analysis.
- Analyzed customer and transaction data.
- Identified business findings.
- Created the Power BI dashboard.
- Organized the dashboard into pages for overview, transaction analysis, and risk/operations.

1.3 TOOLS USED

TOOLS	PURPOSE
Microsoft Excel	Data quality checks-cleaning the datasets
SQL	Querying the data
Python	Performed Exploratory Data Analysis
Power BI	Created interactive dashboard to support the key findings and business insights

1.4 KEY FINDINGS

- Everyday customers form the largest segment by a substantial margin (47.40%), followed by Premium and Student customers, while SME customers represent the smallest segment (14.40%).
- Mobile transactions recorded the highest failure rate and risk review rates as compared with the other channels analyzed.
- FinTrust Bank generated the highest monetary scale in January and March as compared to February.

1.5 CHALLENGES ENCOUNTERED

One of the challenges I encountered was translating the technical outputs into business-oriented findings.

1.6 KEY LIMITATIONS

The analysis is based on the available FinTrust datasets and the period covered by those datasets. Therefore, the findings may not represent longer-term customer or transaction trends. The analysis also identifies patterns but does not establish the causes behind those patterns.

1.7 WEEK 3 FOCUS

Week 3 will focus on strengthening analytical skills through Python-based data analysis, further improving dashboard storytelling, and documenting the FinTrust project for portfolio presentation.
